

## Climate-neutral C- and Si- atoms from WACKER SILICONES

J. Tillmann<sup>[a]</sup>

<sup>[a]</sup> WACKER Chemie AG, Hanns-Seidel-Platz 4, 81737 München, Germany

The industrial sector, in total, is responsible for about a quarter of global carbon emissions, which gives these companies a crucial role to play in fighting climate change and thereby creating a sustainable world economy. *WACKER's* history began more than 100 years ago with making chemistry based on green energy – sustainability is therefore deeply rooted in *WACKER's* DNA. Committing to climate action through rising to key transformative challenges will drive sustainability improvements across all value chains. This presentation focuses on the measures planned to achieve climate-neutral production of silicones at WACKER SILICONES.
